

# Transcriptional Genomics of AAA

IMAD 3, Liège

2012-10-05

# mRNA Expression

- Isolate RNA from control and AAA tissue
- Microarray (printed, Affymetrix, Illumina)
  - Hybridization
  - Signal intensity  $\sim$  proportional to copy number
- Sequence (RNA-Seq)
  - Count of reads  $\sim$  proportional to copy number

# Differential Expression Patterns

- Global gene expression profiles for AAA and control abdominal aorta samples
- Two different microarray platforms
  - Illumina
  - Affymetrix
- 3,274 genes with significantly different expression levels

Lenk et al. BMC Genomics 2007

# **Making sense of complexity**

**How does one comprehend 3,274 genes**

**Pick and choose my favorite genes?**

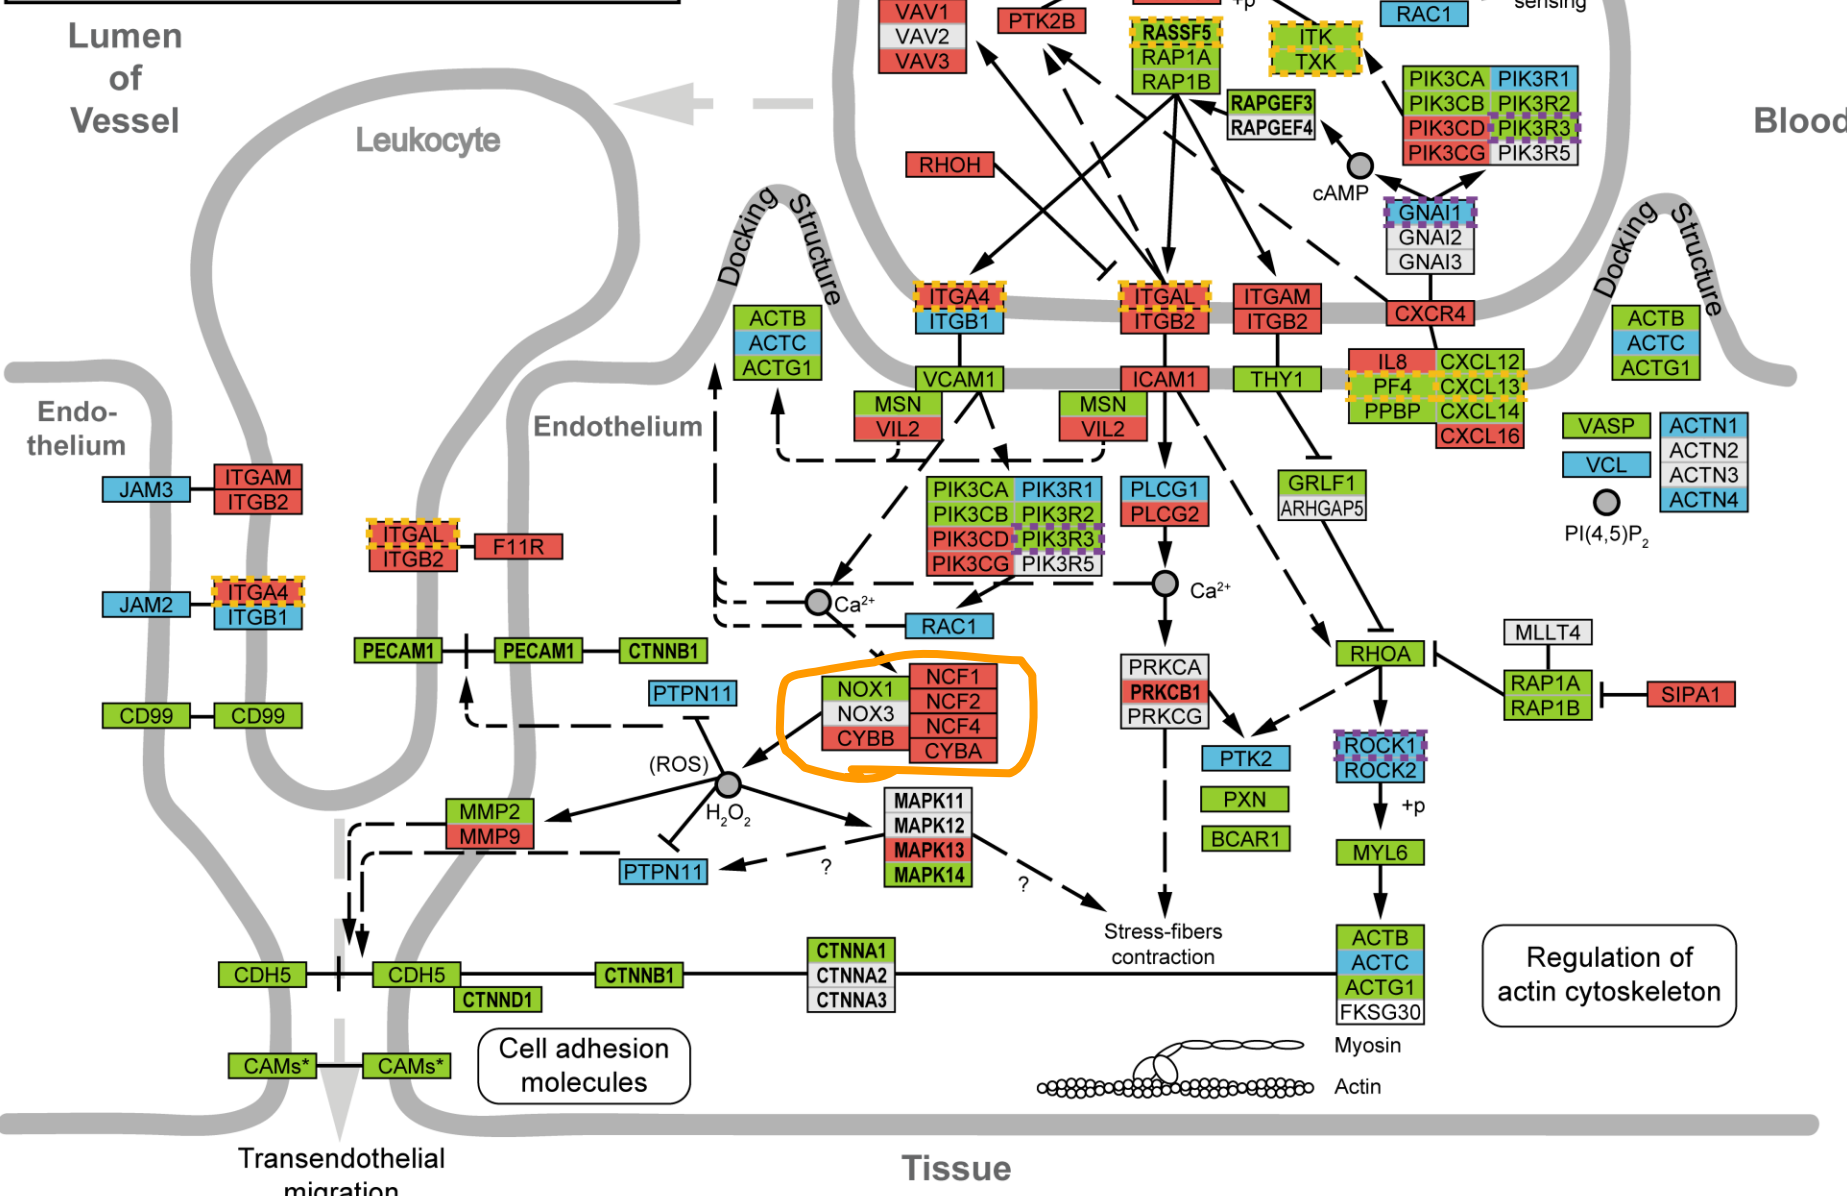

# Approaches for Follow-up

- *In silico* functional analysis
  - Functional classification: Gene Ontology (GO)
  - Pathway analysis: Kyoto Encyclopedia of Genes and Genomes (KEGG)
- *In silico* transcriptional genomics
  - Search for Transcription Factor Binding Sites (TFBS) in promoter sequences

# NK Cytotoxicity Pathway

- Apoptosis of the SMCs in AAA is well known
- Perforin (as well as other proteins) have been shown in AAA using histology previously
- Increased cytotoxicity in AAA

# Leukocyte TransEndothelial Migration (LTEM)

- Immune infiltrates are present in AAA
- Increased expression of “leukocyte” genes fits well with previous data
- Increase in expression of NADPH oxidase
  - Work by others indicates involvement of ROS in AAA

KEGG pathway	Probed*	Observed	Expected	FDR
Regulation of actin cytoskeleton (RAC)	204	76	36.99	4.71e-09

RUNX1	2.9	RUNX1	Runt-homology Domain
NERF	2.3	NERF-1a	ETS-type

# TFBSs Enriched in Upregulated Genes

- Of 1,311 genes, 981 (74.8%) contain one or more binding sites of at least one of the 13 enriched TFBSs
- Range: 1 TFBS (158 genes) to 12 TFBSs
- Average: 4.2 TFBSs/gene

(*MMP9*)

# MMP and TIMP Expression In AAA vs. Control Aorta

# Chromatin Immunoprecipitation

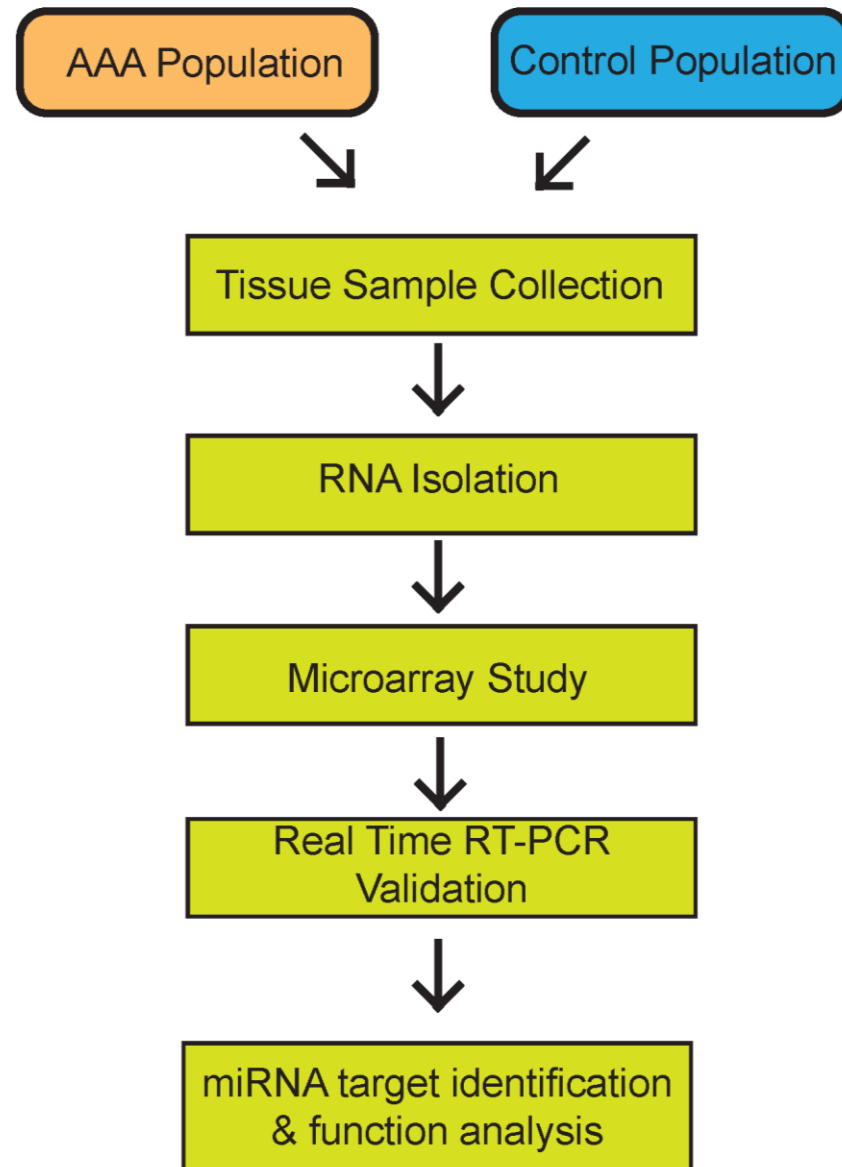

- Isolate nuclei from control and AAA tissue
- Crosslink proteins to DNA
- Immunoprecipitate with Ab to DNA-binding protein
- Hybridize to microarray (ChIP-chip)
  - Signal intensity  $\sim$  proportional to occupancy
- Sequence (ChIP-Seq)
  - Count of reads  $\sim$  proportional to occupancy

## Merged Network-Largest Net with expression data

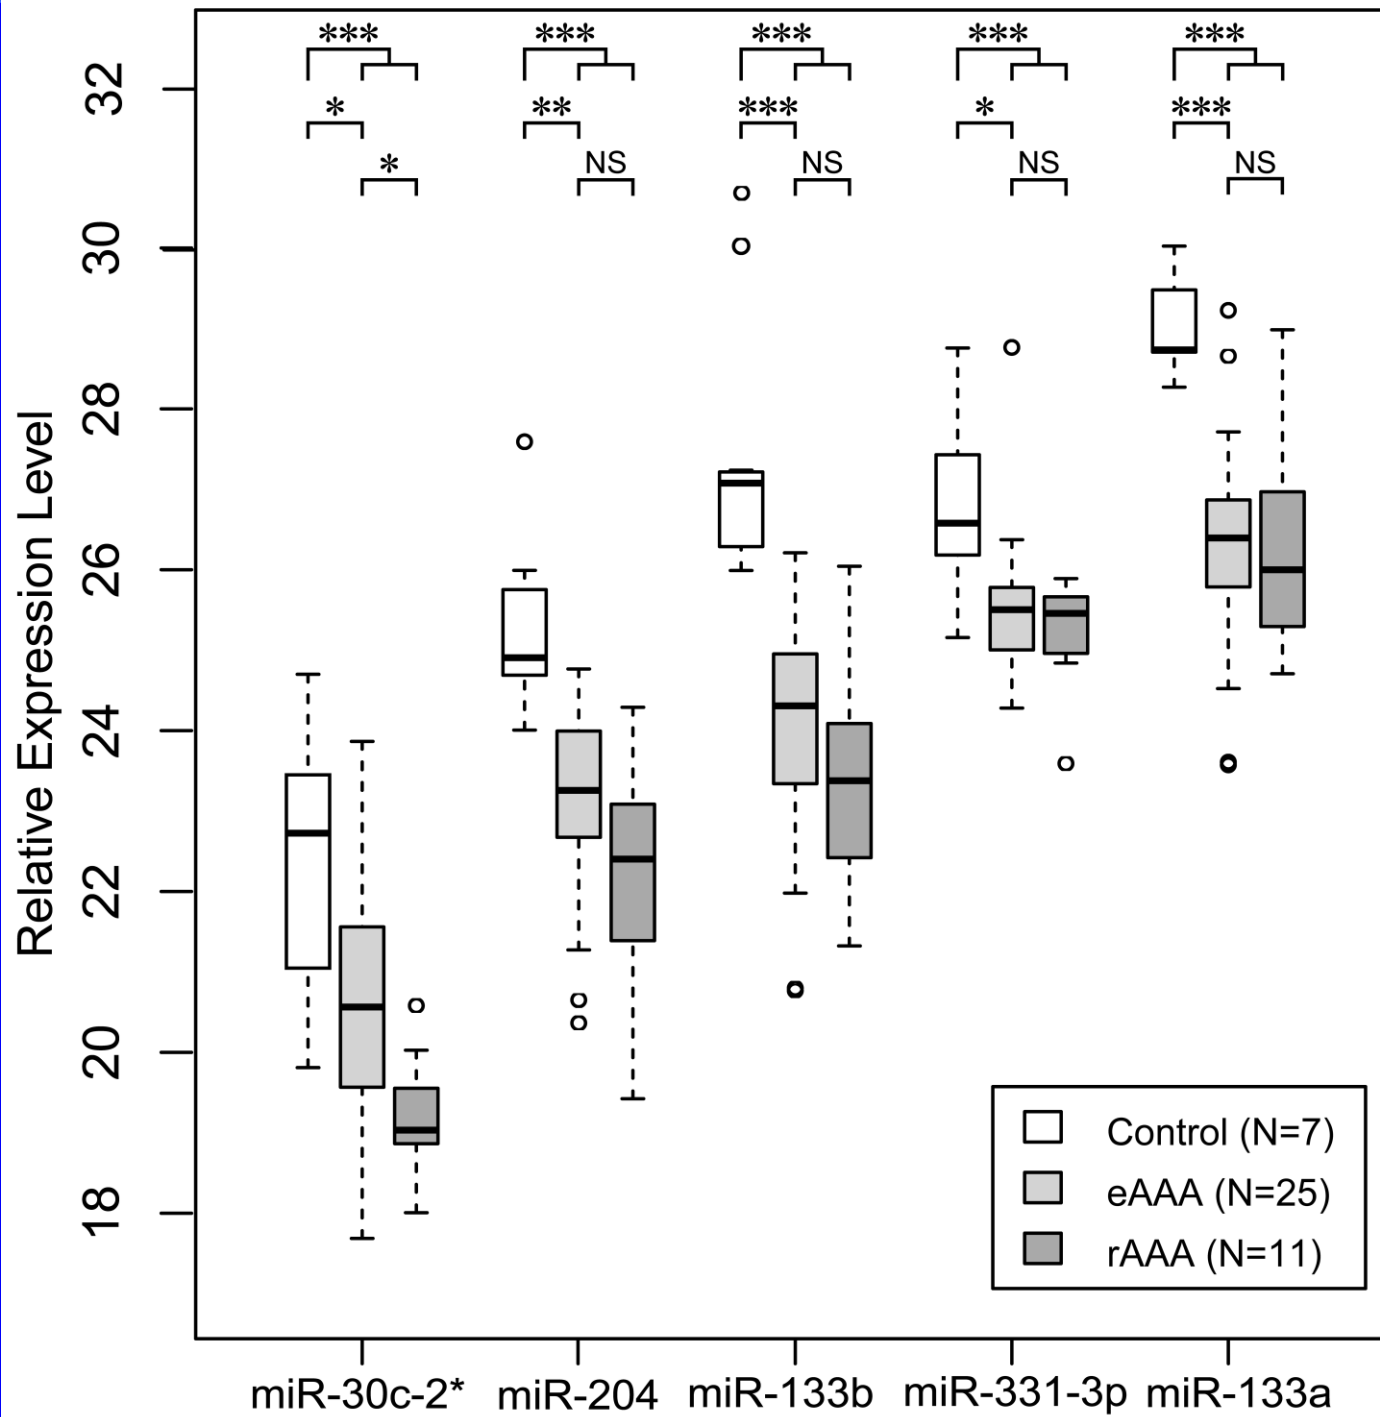

# microRNA Expression

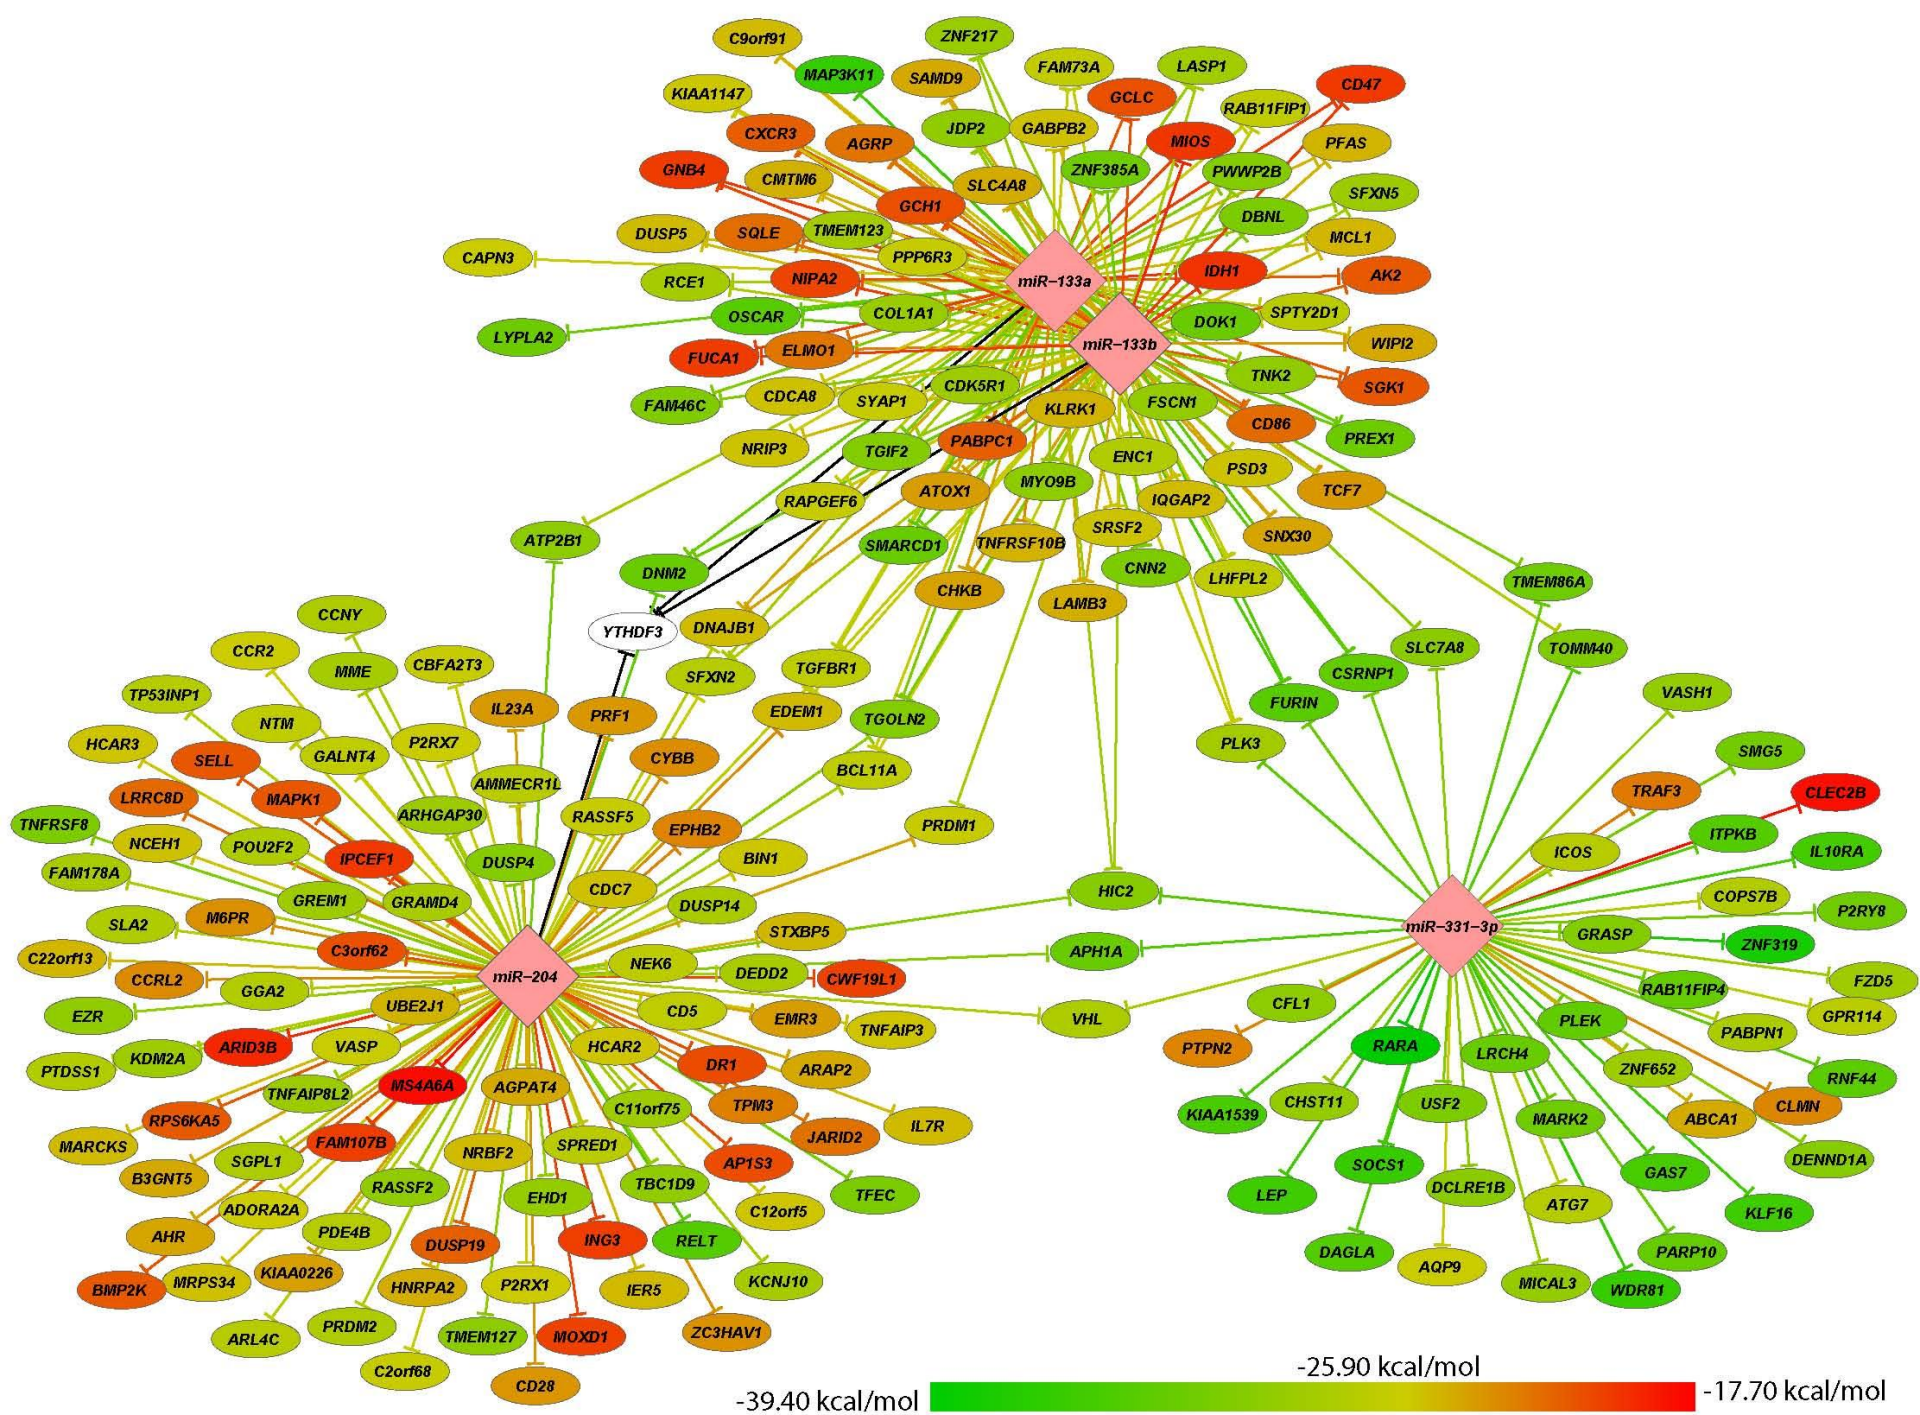

- Isolate RNA from control and AAA tissue
- Microarray (printed, Affymetrix, Illumina)
  - Hybridization
  - Signal intensity  $\sim$  proportional to copy number
- Sequence (RNA-Seq)
  - Count of reads  $\sim$  proportional to copy number
